

# **Discovery Marine Optical Smoke Detector**

Prod	IIICT I	)verview
1 100	uct t	TOI VICTO

Product Type	Marine Optical Smoke Detector
Part No.	58000-600MAR
Digital Communication	XP95, Discovery and CoreProtocol® compatible

# **Product Information**

The Discovery Marine Optical Smoke Detector works on the light scatter principle and is ideal for applications where slow burning or smouldering fires are likely.

- · Responds well to slow burning, smouldering fires
- Well suited for accommodation decks, passages and escape
- Unaffected by wind or atmospheric pressure
- Rejection of transient signals
- · Remote test feature
- · Five EN54 approved response modes

### **Technical Data**

All data is supplied subject to change without notice. Specifications are typical at 24V, 23°C and 50% RH unless otherwise stated.

Detection principle Photo-electric detection of light

scattered in a forward direction by

smoke particles

Chamber configuration Horizontal optical bench housing an

infrared emitter and sensor arranged radially to detect forward scattered

Sensor Silicon PIN photo-diode

Emitter GaAlAs infra-red light emitting diode

Sampling frequency Once per second

Supply Wiring Two wire supply, polarity insensitive L1 & L2 Supply in & out connections Terminal functions

> Remote indicator positive connection (internal 2.2  $k\Omega$ resistance to positive)

-R Remote indicator negative connection (internal 2.2  $k\Omega$ 

resistance to negative)

Digital communication XP95, Discovery and CoreProtocol

> compatible 5-9 V peak to peak

Operating voltage 17 V - 28 V dc Quiescent current 300 µA Power-up surge current 1mA Maximum power-up time 10 seconds

Alarm indicator Two clear 360° viewable light emitting

diode (LED) illuminating red in alarm.

Optional remote LED

Alarm current, LED illuminated

Remote output characteristics Connects to positive line through

 $4.5 k\Omega$  (5 mA maximum)

Clean-air analogue value 23 +4/-0 Alarm level analogue value

Operating temperature -40°C to +70°C Storage temperature -40°C to +80°C

Humidity 0% to 95% RH (no condensation or

icing)

Effect of atmospheric pressure None Effect of wind None Vibration, impact & shock EN54 - 7

designed to IP44 IP Rating

Standards & approvals EN 54-7, CPR, LPCB, MED, LR, DNV-GL, BV, ABS, CCS, KRS and VNIIPO

**Dimensions** 100 mm diameter x 42 mm height (50 mm height with XPERT 7 base)

Weight

(160 g with XPERT 7 mounting base)

Materials Housing White flame-retardant polycarbonate

Terminals Nickel plated stainless steel

# Operation

The Discovery Marine Optical Smoke Detector has a white moulded polycarbonate case with wind-resistant smoke inlets. The indicator LEDs are colourless when the detector is in quiescent state and red in alarm Within the case is a printed circuit board which on one side has the light proof labyrinth chamber with integral gauze surrounding the optical measuring system and on the other the address capture, signal processing and communications electronics.

An infrared light emitting diode within its collimator is arranged at an obtuse angle to the photo-diode. The photo-diode has an integral daylight blocking filter.

The IR LED emits a burst of collimated light every second. In clear air the photo-diode receives no light directly from the IR LED because of the angular arrangement and the chamber baffles. When smoke enters the chamber it scatters light from the emitter IR LED onto the photo-diode in an amount related to the smoke characteristics and density. The photo-diode signal is processed to provide an analogue value for transmission when the detector is interrogated.

# Optical Chamber PCB cover Case moulding Optical Smoke Detector Address Buttons Photo-diode Infra-red LED

# **Electrical description**

The Discovery Marine Optical Smoke Detector is designed to be connected to a two wire loop circuit carrying both data and a 17 V to 28 V dc supply. The detector is connected to the incoming and outgoing supply via terminals L1 and L2 in the mounting base. A remote LED indicator requiring not more than 4 mA at 5 V may be connected between the +R and -R terminals. An earth connection terminal is also provided. The detector is calibrated to give an analogue value of 23 +4/-0 counts in clean air. This value increases with smoke density. A count of 55 corresponds to the alarm level analogue value.

### **Features**

### Response modes

Discovery Marine Optical Smoke Detectors can be operated in any one of five EN54 approved response modes, which can be selected through the fire control panel. Each mode corresponds to a unique response behaviour, which is related to sensitivity to fire. Mode 1 gives a higher sensitivity to fire than Mode 5.

Discovery Marine Optical Smoke Detector Response Times					
Mode	Alarm threshold (%/m)	dB/m	Minimum time to alarm (Seconds)		
1	1.4	0.08	5		
2	1.4	0.08	30		
3	2.1	0.12	5		
4	2.1	0.12	30		
5	2.4	0.14	5		

### Flashing LEDs

Discovery Marine Optical Smoke Detectors have two integral LED indicators, which can be illuminated at any time by the fire control panel to indicate detectors in alarm. A flashing LED mode can also be programmed to activate each time a detector is polled

### Remote test feature

The remote test feature is enabled from the fire control panel. On receipt of the command signal from the fire control panel, the detector is forced electrically into alarm. An analogue value of 85 is returned to the fire control panel to indicate that the detector is working correctly.

### Rejection of transient signals

Discovery detectors are designed to give low sensitivity to very rapid changes in the sensor output, since these are unlikely to be caused by real fire conditions, resulting in fewer false alarms.

### **Drift compensation**

Discovery Marine Optical Smoke Detectors include compensation for signal drift to compensate for changes in the sensor output caused, for example by dust in the chamber, and will therefore hold the sensitivity at a constant level even with severe chamber contamination. This increased stability is achieved without significantly affecting the detectors sensitivity to fire whilst still meeting the requirements of the EN54 standard.

Response characteristics of Discovery Optical Smoke Detectors				
Type of fire	Response			
Overheating/thermal combustion	Very Good			
Smouldering/glowing combustion	Moderate/Good			
Flaming combustion	Good			
Flaming with high heat output	Good			
Flaming - clean burning	Poor			

### EMC Directive 2014/30/EU

The Discovery Marine Optical Smoke Detector complies with the essential requirements of the EMC Directive 2014/30/EU, provided that it is used as described in this data sheet.

A copy of the Declaration of Conformity is available from the Apollo website: www.apollo-fire.co.uk.

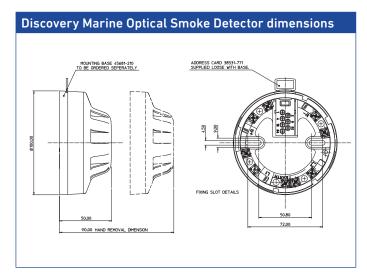

# Construction Products Regulation 305/2011/EU

The Discovery Marine Optical Smoke Detector complies with the essential requirements of the Construction Products Regulation 305/2011/EU.

A copy of the Declaration of Performance is available from the Apollo website: www.apollo-fire.co.uk

# Marine Equipment Directive 2014/90/EU

The Discovery Marine Optical Smoke Detector complies with the essential requirements of the Marine Equipment Directive 2014/90/EU.

 ${\it Note:}$  Should be used with Deckhead Mounting Box - Part No. 45681-217 if ingress protection is required.
